

YOUR DC WATER BILL

WHAT CHANGES CAN YOU EXPECT?

September 19, 2019

Nicola Y. Whiteman Esq.

Senior Vice President of Government Affairs

Apartment and Office Building Association of Metropolitan Washington

OVERVIEW OF RATES & FEES FOR FY 2020

- During FY 2019, the DC Water Board approved a proposed change in the way Clean Rivers costs are recovered starting in FY 2020.
- Starting with this year's budget, the DC Water Board revised the rate structure to begin shifting a portion of Clean Rivers costs to the sewer volumetric rate, starting with
 - 18 percent in FY 2020;
 - Proposed 28 percent in FY 2021; and
 - Proposed 37 percent for FY 2022 and beyond based on the amount of sanitary flow that is captured by the new tunnels.
- **The FY20 budget:**
 - Decreases the CRIAC from projected \$25.58 in FY2020 to **\$20.94 per ERU** per month
 - **Increases the Waters and Sewer rate by 11.5%**
- Increases from 4% to 20% CRIAC discount from Stormwater Best Management Practices

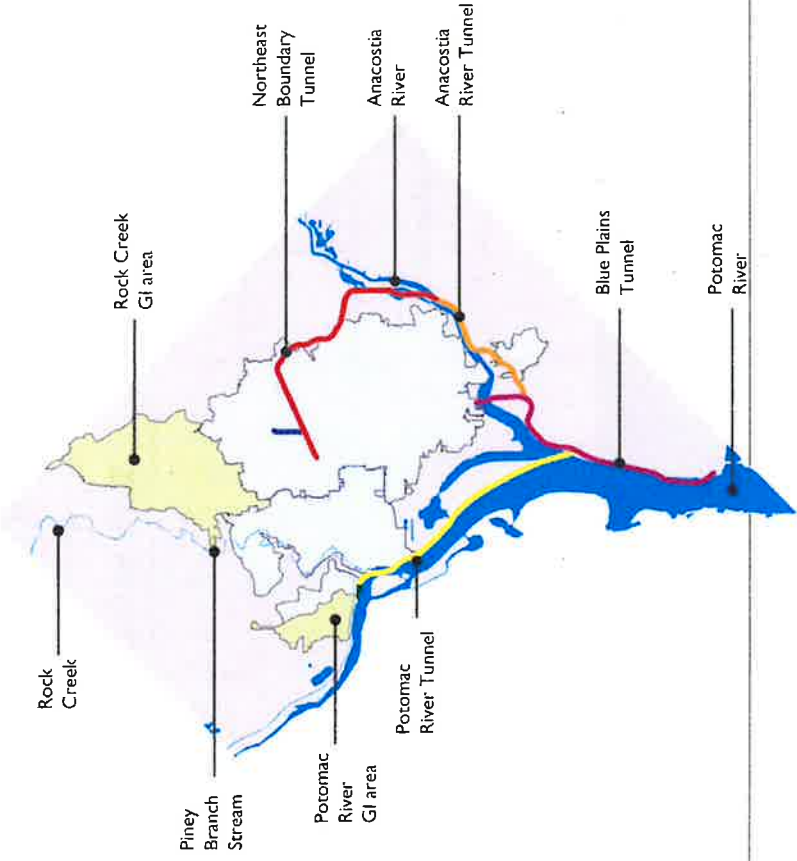

APPROVED DC WATER RATES & FEES

RATE CLASS	APPROVED FY 2019 RATES (Effective: 10/01/18)	APPROVED FY 2020 RATES (Effective: 10/01/19)
WATER RATE	Residential (Consumption up to 4Ccf)	Residential (Consumption up to 4Ccf)
	Residential (Consumption greater than 4Ccf)	Residential (Consumption greater than 4Ccf)
	Multifamily/DC Housing Authority	Multifamily/DC Housing Authority
	Non-residential	Non-residential
SEWER RATE	\$7.75/CCF	\$8.89/CCF; \$11.89/1,000 Gals. Of Water Use
IMPERVIOUS SURFACE AREA CHARGE	\$23.00/month or ERU	\$20.94/month or ERU
RIGHT OF WAY (ROW)/ PAYMENT IN LIEU OF TAXES FEE (PILOT)	\$0.68/CCF Divided as follows: ROW \$0.18/CCF PILOT \$0.50/CCF	\$0.70/CCF Divided as follows: ROW \$0.19/CCF PILOT \$0.51/CCF
STORMWATER FEE	Currently, the Stormwater Fee is \$2.67 per ERU.	NO CHANGE

The Clean Rivers Program

- Court-mandated, \$2.7 billion program that will be completed in 2030
- Will reduce combined sewer overflows (CSO's) into the District's waterways - the Anacostia and Potomac Rivers and Rock Creek
- The Project is a massive infrastructure and support program designed to capture and clean wastewater during rainfalls before it ever reaches our rivers

Rates 101: Funding for DC Water

- DC Water charges a combination of Fixed and Volumetric Fees to pay for operations and capital improvements:
- **Volumetric charges** are based on consumption, the amount of water a customer uses; for example:
 - Water Rate –
 - \$3.06 0-4 CCF (One CCF is about 748 gallons) for residential customers
 - \$4.10 > 4 CCF
 - \$3.54/Ccf for multifamily
 - \$4.25/CcF for non-residential
 - Sewer Rate - **\$8.89 per CCF**
 - Clean Rivers Impervious Area Charge - \$20.94 (for one ERU)
- **Fixed Fees** are not based on usage, for example (average household charge):
 - Metering Fee - Varies by size with monthly fees ranging from \$3.86 for a 5/8 inch (typical for residential customer) meter to \$349.06 (typically used for large commercial customers).
 - Water System Replacement Fee – Varies by size. The fee for a 5/8" meter is \$6.30.

Impervious Area vs. Water Usage

Class	Share of Impervious Surface Area (%)	Share of Water Use (%)
Single Family Residential	28%	21%
Multi-Family Residential	12%	27%
Commercial (<i>Hotels, Churches, etc.</i>)	33%	35%
DC Government	8%	2%
Federal	18%	13%
District of Columbia Housing Authority	1%	2%
Total	100%	100%

As stated in 2008:

- An impervious area rate structure will cause a shift in the cost allocation between customer classes due to differences in their water use and the amount of impervious area
 - Multi-family properties will see a major reduction in costs allocated to that class due to the high-density of the land use
 - Federal properties will see a larger portion of costs allocated to them due to same reason as above

CRIAC Approach

- Current Approach
 - An impervious area (IA) rate can provide a better allocation of cost responsibility than a water/sewer consumption rate for these programs relating to managing surface runoff
 - Existing combined sewer system generally can handle customer flows
 - Overflows occur during rain events
 - **Helps ensure all who have stormwater runoff pay**
- Impervious area (IA) rates have been used in many cities for recovery of stormwater program costs. Costs are allocated to property owners on the basis of imperviousness (the amount of built or paved area), except for streets and right-of-ways which are considered common property

Shifting Cost from CRIAC to Sewer Volumetric Rate

- Explanation: DC Water wants to change its practice and shift cost recovery for Clean River costs to sewer volumetric rate.
- DC Water asserts that this method will help improve equity and give customers more ability to control their bill based on consumption.

Shifting Cost from CRIAC to Sewer Volumetric Rate

- **Shifting Cost from CRIAC to Sewer Volumetric Rate:**
 - 18% Shift:
 - Calculated based on pollutant concentrations in sanitary wastewater, stormwater runoff and CSO
 - Uses average of following pollutants: total suspended solids (TSS), biochemical oxygen demand (BOD), total nitrogen (TN) and total phosphorus (TP)
 - Variability in results based on underlying variability in pollutant concentrations from multiple sources
 - 37% Shift:
 - Calculated based on volume of sanitary wastewater, stormwater runoff and CSO
 - Uses collection system computer model for average rainfall year to predict volume of each component
 - Model applied for same conditions used to design the Clean Rivers Project and obtain regulatory determination that plan will meet District water quality standards
- **Impact of a Shift to Volumetric:**
 - Shifting some of the Clean Rivers cost recovery to the volumetric rate gives customers more control over the amount that they pay towards the project
 - As a class, Multi-family and Commercial would pay more while Federal Government would pay less
 - Small volume customers in every class would generally pay less
 - Average Residential customers would pay about the same
 - Shift could be phased-in

Shifting Cost from CRIAC to Sewer Volumetric Rate

Alternative 1: 18% of CRIAC Shift to Sewer Volumetric, Phase-in Year One

Monthly	Average Household	Average Multi-Family	Sample Commercial	Sample Cemetery	Sample House of Worship (High Con)	Sample House of Worship (Low Con)
Monthly CCF	6.2	92.6	4,478	4.0	876	9.42
ERU	1	6.3	52.2	115.1	128.6	59.2
FY2020 Monthly Total Bill	\$114	\$1,373	\$62,315	\$3,314	\$15,812	\$1,887
FY 2020 Estimated Total Bill with 18% IAC recovered through Volumetric Charge	\$114	\$1,413	\$65,431	\$2,783	\$15,873	\$1,619

Alternative 2: 37% of CRIAC Shift to Sewer Volumetric, No Phase-in

Monthly	Average Household	Average Multi-Family	Sample Commercial	Sample Cemetery	Sample House of Worship (High Con)	Sample House of Worship (Low Con)
Monthly CCF	6.2	92.6	4,478	4.0	876	9.42
ERU	1	6.3	52.2	115.1	128.6	59.2
FY2020 Monthly Total Bill	\$114	\$1,373	\$62,315	\$3,314	\$15,812	\$1,887
FY 2020 Estimated Total Bill with 37% IAC recovered through Volumetric Charge	\$114	\$1,454	\$68,671	\$2,228	\$15,932	\$1,340

Projected Clean Rivers Impervious Area Charge

- Charges are driven by debt service costs necessary to support the \$2.7 billion Clean Rivers Project
- The annual Clean Rivers Project costs for the average residential customer (700 – 2,000 sq. ft. of impervious area) is projected to increase from \$251.28 in FY 2020 to \$351.72 in FY 2028

Multi-Family

	Units	FY 2018	FY 2019	(\$)	(%)
DC Water Water and Sewer Retail Rates ⁽¹⁾	Ccf	\$ 906.50	\$ 1,028.60	\$ 122.10	13.5%
